

Aspiring Python backend developer with a Computer Science degree, currently completing hands-on training in Django, Django REST Framework, and FastAPI, focused on building clean, well-structured REST APIs backed by PostgreSQL and Redis.

TRAINING & CERTIFICATION

Ustudy Academy, IT Park Uzbekistan (Uzbekistan, onsite)

Python Backend Development Program | September 2025 – Present (expected completion: September 2026)

Intensive 10-module backend engineering track: Python → PostgreSQL → Django/DRF → Celery/Channels → Docker/CI-CD, with a graded practical project at the end of every module.

- Completed 120+ hands-on lessons and graded module exams covering Python, OOP, PostgreSQL, Django, Django REST Framework, Celery, WebSockets, and DevOps.
- Building REST APIs with Django REST Framework — serializers, ViewSets, JWT authentication, role-based permissions, and search/filter/pagination — and improving response times with Redis caching and ORM query optimization (select_related / prefetch_related).
- Designing normalized PostgreSQL schemas using PK/FK relationships, JOINS, and views to eliminate duplicate data and keep reporting queries reusable across projects.
- Practicing background task processing with Celery and Celery Beat, and real-time features with Django Channels (WebSockets).
- Containerizing projects with Docker and Docker Compose, setting up CI/CD pipelines, and version-controlling work with Git/GitHub.
- Technologies: Python, Django, DRF, FastAPI, PostgreSQL, Redis, Celery, Django Channels, Docker, Git, JWT, Postman

Coursera (Meta) (Online)

Meta Back-End Developer Professional Certificate | Completed June 2025

- 9-course program covering Python programming, Django, REST APIs, databases, and version control.

Five Million AI Leaders (Uzbekistan & UAE, online)

Prompt Engineering for AI Systems | Completed March 2026

- Joint initiative by the governments of Uzbekistan and the UAE to train professionals in AI and prompt engineering.

EDUCATION Bachelor's Degree, Engineer-Programmer, Computer Science and Programming Technologies | National University of Uzbekistan (2022 – 2026)

PROJECTS

- **Online Store Backend API (in progress):** Backend for an e-commerce platform with product catalog, cart, and order management. Building REST endpoints with Django REST Framework and designing the PostgreSQL schema for products, users, and orders.
- **Gym Management Telegram Bot (in progress):** Telegram bot for gym members to view schedules, track workouts, and manage subscriptions. Built with Python and the python-telegram-bot library, with data stored in SQLite.
- **Language Learning Telegram Bot (in progress):** Telegram bot that helps users practice vocabulary and grammar through interactive quiz-style exercises, with per-user progress tracking.

SKILLS

Languages: Python, SQL

Frameworks & Libraries: Django, Django REST Framework (DRF), FastAPI

Databases & Caching: PostgreSQL, SQLite, Redis

Tools & DevOps: Git, GitHub, Docker, Postman, Linux, CI/CD

LANGUAGES Uzbek (native) • English (Intermediate) • Russian (Beginner)
